

flexx-IPC® EasyLabel

The concept behind flexx-IPC® *EasyLabel* templates makes it easy to customize the look of your flexx-IPC®. *EasyLabel* templates enable you to print your own key labels on any laser printer.

STEP 1: DOWNLOAD THE TEMPLATES

Go to www.flexx-ipc.com and select the flexx-IPC® *EasyLabel* template that you need, depending on the flexx-IPC® panel PC system that you are working with. The templates are made for use with Microsoft Word® and can be used both with a PC as well as with a Mac.

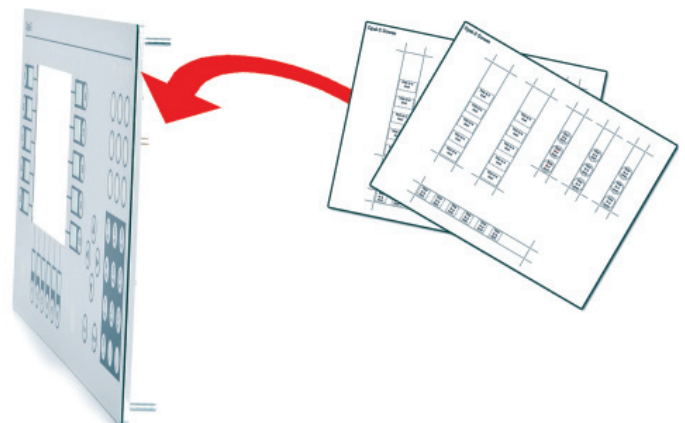

STEP 2: PRINT THE LABELS

Each label template can be printed individually and you can upload graphics or use signs and numbers within the template. If you plan on not using certain keys on your flexx-IPC® panel PC, simply leave that key field blank within the template. Print the templates using a laser printer.

STEP 3: CUSTOMIZE YOUR SYSTEM

After the labels have been printed, you can cut them along the provided lines and simply slide them into the slide-in pockets on the back of your flexx-IPC® panel PC. If you plan not to use a whole row of keys, simply slide in a blank label.

flexx-IPC® EasyLabel - Customisation made easy!
